

Sheffield East

This project covers the main route between Sheffield and Worksop, and the services that run along it. Also included is the Midland Main Line, popular for many north-south freight services. The line out to Stocksbridge is also mapped, but no services run over this in the included timetable.

I hope you enjoy!

Simulation

The timetable contains all of the passenger services between Sheffield and Worksop, as well as Nottingham services which terminate at Worksop.

A large number of freight services are included, especially on the Midland Main Line, however, freight services are not included to Tinsley, Stocksbridge and Maltby.

A few passenger services run up the Midland Main Line from Chesterfield and up via Woodhouse into Sheffield, these services are included also. Additionally, there are 5 services per day that leave Sheffield towards Woodburn Junction where they turn around to use a different platform at Sheffield.

The included timetable has multiple start points, however for the best experience, I recommend starting from 06:00, as the morning timetable is far more varied and interesting.

Development

This project is open for contribution on the ROS GitHub Organisation. If you would like to contribute, please get in touch on the ROS Discord server.
